Due to the fact that you can just conserve the information in your computer unit as well as gizmo. So, it enables you read it almost everywhere you have desire to read [Animal Senses: How Animals See, Hear, Taste, Smell And Feel \(Animal Behavior\) By Pamela Hickman](#)

From School Library Journal

Grade 2-5A Hickman looks at each of the senses as experienced by a variety of animals, compares them to corresponding human traits, and focuses on one or two interesting environmental adaptations or defense mechanisms. For example, the section on sight examines different types of animal eyes, and then devotes almost a page to frogs and the placement of their eyes on top of their heads. A final chapter looks at "extra" senses humans don't have, such as the rattlesnake's heat-sensing ability. Much of this material can be found in other sources, but this book also includes demonstrations designed to foster a better understanding of the ways animals use their senses. One involves filling a bucket with sand and burying pieces of fruit and other objects in it. Feeling for the food objects and differentiating among them approximates the experience of a walrus using its whiskers on a muddy ocean bottom. The large (often full-page), full-color drawings and neatly boxed text make the book both attractive and easy to read. The information will not be sufficient for a long report, but it is a good introductory or supplementary source. The experiments could also be used as science projects or classroom activities. This title will also be fascinating to browsers, who can pick up all sorts of factual tidbits. A Arwen Marshall, New York Public Library

From Booklist

Gr. 3⁺-5, younger for reading aloud. Eight of the double-page spreads in this large-format book feature big, detailed paintings of individual animals, just the sort of pictures that preschool and primary-grade teachers could use on the topic. The other pages, with smaller pictures, paragraphs of information, and science activities, seem to be aimed at somewhat older children. Whatever audience discovers the book, kids will find plenty of intriguing information about how different animals (including frogs, bats, butterflies, deer, and others) not only see, hear, smell, taste, and feel what's around them but also pick up on clues by sensing heat, electricity, and magnetic fields. This attractive volume combines pick-me-up visual appeal with solid facts about animal senses. Carolyn Phelan

Review

A wonderful introduction to the world of animals ... the illustrations are informative and accurate ... An excellent teaching tool not only within the classroom, but also for parents and their children.?Science Books and Films

Good for younger kids interested in animals.

By A. Thomas

Large print book. Thin but interesting. Good for younger kids interested in animals. My grandsons did not get into it.
