Review

"Frank Schirmacher convincingly shows connections among such ostensibly disparate issues as the language of the Cold War and that of the trading floor, as he demonstrates how algorithms and statistical models have become the overwhelmingly dominant means we use to understand the brain, the market, the state and nature. In the end the human person becomes defined as a problem, because unable to be reduced to calculation in this way. This critique of contemporary egoism from the editor of Germany's leading liberal conservative newspaper makes chilling but highly thought-provoking reading."

Colin Crouch, University of Warwick

"This book reads like a sociological thriller."

Ulrich Beck, *Die Welt*

"A piece of cultural criticism in the very best sense: a diagnosis, prognosis and cure all in one for our technologically induced egoism."

Der Tagesspiegel

"This book is an urgently needed appeal for us to rethink what we understand by economic rationality."

Handelsblatt

"In this new book, Frank Schirmacher once again shows an extraordinary understanding of the volatility of our times, bringing into focus the widespread discontent felt in many sections of society."

Tages-Anzeiger

EGO: THE GAME OF LIFE BY FRANK SCHIRRMACHER PDF

Twenty-five years after the end of the Cold War, a new Cold War is being waged in our societies. During the Cold War a theoretical model of man was developed by economists and the military, an egotistical being interested only in his own benefit and in duping his opponents to achieve his ends: a modern homo oeconomicus. After his career in the Cold War ended, he was not scrapped but adapted to the needs of the twenty-first century. He became the ringmaster of a new era of information capitalism. He sought to read, control and influence thoughts; to predict, price and eliminate risks. Today stock-market trading is guided by him. He uses computer algorithms and Big Data to build up detailed pictures of our preferences and then suggest and sell goods to us. The model has become a self-fulfilling prophecy. We are no longer the masters of our own fate. The Game of Life runs without us.

Schirmacher traces the progress of this extreme rationalization of social life from the Cold War games of the 1950s Rand Corporation to the stock-market trading techniques that brought about the financial crash of 2008, showing how these developments were interwoven with the rise of game theory, rational choice theory and neoliberal economics. The state and politics increasingly submitted themselves to the logic of computerized game theory and an economic view of the world, evading real decision-making in the process. In this brave new world individuals, alone in front of their computers, may think they are constructing a reality of their own choosing, but in fact they are being manipulated all along by others who are setting the rules of the game.

This international bestseller by one of Germany's most distinguished journalists is a powerful indictment of a way of thinking that has become pervasive and threatens to undermine not only parliaments and constitutions but also the sovereignty of the individual to be the person he or she wants to be.

It's a John Nash world out there

By David Wineberg

Ego: The Game of Life is inflammatory. Extraordinarily so. On nearly every other page there is an inflammatory statement to challenge the reader. It is relentless and effective. Right in the preface, Schirmacher says in the game of life, you have to accept the idea that "the universe has singled you out to be its personal enemy." It is not possible for me to put down a book that begins this way. And it does not disappoint.

At its core is Schirmacher's premise that rational choice theory and game theory are now running society. And that they were developed by a certified paranoid schizophrenic – John Nash. Nash could not countenance people acting selflessly. Fraternity and solidarity made no sense to Nash, who dismissed them as factors. It was all about self interest, and nothing else mattered. Nash is aided and abetted by economists who invented homo economicus, the evil twin of every human, who only acts selfishly to maximize returns. Plugged into faulty, incomplete models, the results have been unparalleled disasters, producing "impossible" failures and repeated once in a million year setbacks.

We are now players in John Nash's game, the game of life. Google, Yahoo, Amazon and Facebook all build assumptions about us. They take us in new directions whether we want to go or not. Google Adwords uses an algorithm reputed to be the most advanced in the world, more sophisticated than any military app, which also models everyone and every action on Nash's paranoia. Every internet search is an ad auction that adds to the knowledgebase. They are same as the algorithms used by hedge funds and real time traders, pumping millions of trades around the clock. Finance and the internet are merging to dominate everything.

This reductive analysis is as good as any out there, and better than most. But the primary impact from the book is in the challenging statements that pop up continually. Some are Schirmacher's and some are from other people, but they all have the same disturbing quality:

-The Cold War simply moved to Wall Street.

- After the end of the Cold War, a new cold war is opening up in the heart of societies.
- Economists invented homo economicus and convinced the world that it was natural law.
- Wall Street has reinvented the alchemist, turning worthless paper into real money at will.
- Derivatives went from zero in the 1970s to \$1.2 quadrillion: 20 times more than the GNP of the world.
- In the 50s, stocks were held an average of four years. In 2010 it was two months. In 2014 it was 22 seconds.
- The most imperialistic economic theory was obviously Marxism.
- Everywhere today it is a binary question of exclusion or inclusion. You are with us or against us, you are worthy or not, you are in or you're out.
- Individuals are being fashioned by the machinery of an unrestrained information market.
- What if the system didn't reflect our "preferences", but actively shaped them?
- The Philosopher's Stone was not a stone but a fluid: pure liquidity
- Information is not the precursor of knowledge, but the tool of salesmen.
- Twenty years' experience is really one year of experience repeated twenty times.
- Computers, from stock exchange terminals to PCs are merely tools that imitate the capabilities of the autistic.

He lays the blame for the financial crisis squarely on the shoulders of John Nash and those who leverage him. The perverse result is the twisted, unequal society we have today. Schirrmacher died in 2014 at the age of 54. It's unfortunate he is not around to collect the reactions to *The Game of Life*, and tell us how right he was.

The author hates self as he has no self-respect to do even basic research?

By I'm no expert, yet...

It would be nice if author had enough ego/self-respect to do basic research.

A lot of readers may react this way:

His conception of what rationality and self-interest mean in economics, psychology, and Aristotelian philosophy is equivalent to someone making assumptions about the meaning instead of actually understanding how the term is used in those subjects.

The dead giveaway is e.g. his ridiculous misrepresentations of game theory or the work of Ayn Rand.

Note to author: Reading the actual works or using GOOGLE is a good thing. What is going on in Germany that this is even considered a respectable work by reviewers?
